SUMMARY

A business analyst who pairs 3+ years of hands-on financial and operational analysis with an MS in Business Analytics, bringing the rare mix of domain fluency and technical range most teams lack. I turn messy, multi-source data into business, product, and operational decisions leaders can act on, bridge business and technical stakeholders, and consistently surface the inefficiencies others overlook. I bring full-lifecycle command of Python, SQL, R, Tableau, and Power BI, a habit of automating manual work, and a track record of rigorous, on-deadline delivery in regulated environments.

ANALYTICAL TOOLKIT

Languages & Query: Python (Pandas, NumPy), R (dplyr, ggplot2), SQL, Advanced Excel / VBA, Google Sheets

Analysis & Modeling: Logistic & Linear Regression, K-Means Clustering, Decision Trees, Hypothesis Testing, Feature Engineering, Perceptual Mapping

Visualization & BI: Tableau, Power BI, Plotly, Streamlit, Executive Dashboards, KPI Design & Tracking

Data & Workflow: ETL & Data Wrangling, Relational Database Design, MIS Management, AI-Assisted Analytics, Workflow Automation

Domain: Credit Risk, Financial Modeling, Revenue Analytics, Market & Competitive Research, Stakeholder Translation

Google Prompting Essentials, Google · **Introduction to Business Analysis**, IBM · **Foundations of Data Science**, Google · Coursera, 2026

EXPERIENCE

Business Strategy Analyst · Jaris Technologies

May 2026 – Present

- Own the market-opportunity assessment for a venture automating aircraft ramp and turnaround operations, validating an untapped market with no incumbent and building the strategic case for market entry.
- Built the quantitative business case in Excel, mapping the 13-step ground-handling process for an A320 turnaround at Toulouse and modeling its cost, time, and CO2, quantifying up to ~€740K in cascade cost from a single serious ramp incident.
- Scaled the model to a 10-aircraft A320 fleet to size the opportunity, quantifying ~€2.9M in annual loss exposure from ramp incidents and delays, the value the automation is positioned to reduce.
- Defined the automated to-be value proposition against this baseline and synthesized the analysis into strategic recommendations that shape product direction and the go-to-market narrative for leadership.

Graduate Student Assistant · Northeastern University

San Francisco, CA | Sep 2025 – Present

- Manage the exam-accommodation database and schedule accommodated exams for the Disability Resource Center, resolving complex cases such as students with multiple same-day exams and coordinating with the center's head to keep exam operations running smoothly.
- Analyzed a semester of exam-volume and scheduling data using SQL, Python, Excel, and Tableau, identifying a gap in the accommodations database: actual exam duration was never captured (only the time booked), leaving rooms underused; recommended tracking actual usage to improve room utilization and scheduling.

Business Operations Analyst · Star Housing Finance Ltd.

India | Jul 2022 – May 2025

- Built and owned end-to-end revenue and territory analytics dashboards in Tableau, Excel, and Google Sheets, eliminating 9+ hours of manual weekly reporting and delivering real-time intelligence used for strategic decisions at the leadership level.
- Developed financial models across 50+ corporate, SME, and retail accounts, assessing repayment capacity, credit risk, and revenue potential; produced CAM Reports that were the primary input for loan approvals worth crores in portfolio value.
- Gathered and translated data requirements from 5+ teams (sales, finance, IT, operations, compliance) into analytical workflows, serving as the bridge between business stakeholders and technical teams.
- Applied AI-assisted analytics tools to automate data categorization, surface early risk signals, and accelerate reporting cycles, improving productivity across the operations pipeline.

Analyst · Paisabuddy Finance Pvt. Ltd.

India | Jun 2021 – Jun 2022

- Built structured financial models for 100+ corporate, SME, and retail accounts, analyzing collateral valuations, loan-to-value ratios, pricing structures, and repayment behavior to produce data-backed business cases for senior approval committees under tight deadlines.
- Monitored portfolio-level KPIs and applied data-analysis methods to surface early risk signals across a live loan book, translating findings into actionable leadership briefs that enabled proactive intervention and improved collections outcomes.
- Designed and executed collections-recovery strategies for overdue accounts by pairing data analysis with direct stakeholder engagement, reducing default exposure through systematic prioritization of high-risk borrowers.
- Conducted compliance audits ensuring 100% adherence to KYC and AML guidelines across all active accounts, reinforcing the data accuracy and documentation discipline required in regulated financial services.

EDUCATION

MS in Business Analytics · D'Amore-McKim School of Business, Northeastern University (Expected Dec 2026)

PG Diploma in Finance Management · Welingkar Institute of Management Development & Research (2022 – 2024)

Bachelor of Business Administration · Savitribai Phule Pune University (2019 – 2021)
