

NIVAASLINK

Simplifying Auction Property Access for Middle-Income Home Buyers

"Because owning a home should be simpler."

EXECUTIVE SUMMARY

India's bank and NBFC auction property market holds tens of thousands of residential properties listed every month at an average of 41.8% below market value — yet middle-income families who could afford these homes almost never participate in auctions. The barrier is not financial. It is informational.

NivaasLink is a web-based information platform that aggregates auction property listings, provides transparent pricing and risk data, matches buyers with lenders, and guides first-time buyers through a process that is otherwise complex and intimidating. This report presents the business context, primary and secondary data analysis, central insight, platform design, and implementation roadmap for NivaasLink.

01 SETTING & HOOK — THE BUSINESS CONTEXT

Why Auction Properties? Why Now?

Owning a home is a lifelong aspiration for hundreds of millions of Indian families. For middle and lower-income households, this dream has been shaped by rising property prices, limited affordable housing supply, and complex financing processes. Yet within India's regulated banking system, an overlooked opportunity exists every single month: bank and NBFC auction properties. These are residential assets repossessed from loan defaulters and sold under the SARFAESI Act, 2002 — often at prices 30 to 60 percent below prevailing market rates.

The Situation

India's individual housing loan market has grown nearly four times in a decade, reaching **Rs. 37.14 lakh crore in FY2025** (NHB Annual Report 2024-25). The country's PMAY-Urban programme has sanctioned 119.26 lakh homes — yet only 93.61 lakh have been completed, leaving a gap of 25.65 lakh units (MoHUA, cited in NHB 2024-25). Meanwhile, scheduled commercial banks held a gross NPA ratio of 2.8% as of March 2024 (RBI Annual Report 2023-24) — the lowest in 12 years, but still representing hundreds of thousands of secured residential properties that are periodically auctioned to recover bank dues.

Why This Matters

Our primary research — a dataset of 50 bank auction listings collected from findauction.in and eauctiondekho.com in April 2026 — found an average auction price **41.8% below comparable market listings** in the same locality. Discounts ranged from 34% to 56%. Platforms like findauction.in list 9,139 active auction properties in Mumbai alone, 3,862 in Pune, and 2,265 in Bangalore. The affordable housing supply exists. The financially eligible buyers exist. What is absent is a trusted, accessible platform that connects them.

The Decision Stakeholders Must Make

How can we make auction property information accessible, understandable, and actionable for first-time and middle-income buyers — so they can participate in a market currently dominated by institutional investors and professional bidders who have legal expertise, market knowledge, and capital that ordinary buyers lack?

Source: NHB Annual Report 2024-25; RBI Annual Report 2023-24; Primary Dataset — findauction.in & eauctiondekho.com, April 2026

02 DATA SOURCES & DATA QUALITY

Our Evidence Base

Primary Data — 50 Auction Listings Collected & Analysed

The authors independently collected 50 bank auction property listings from findauction.in and eauctiondekho.com during April 2026, covering Mumbai, Delhi, Pune, Bangalore, Lucknow, Indore, Ahmedabad, and Nashik. For each listing, the auction reserve price was recorded and compared against the average market listing price for the same

locality sourced from NoBroker City Reports 2025-26 and MagicBricks locality averages. Discount percentage was calculated as: **(Market Price - Auction Price) / Market Price x 100**. The full dataset is available as a separate Excel file accompanying this report.

Secondary Sources

Source	Data Used for NivaasLink
NHB Annual Report 2024-25	Housing loan market size (Rs 37.14L cr), NBFC portfolio, PMAY gap
RBI Annual Report 2023-24	Gross NPA ratio 2.8%, banking sector stress and NPA volumes
Knight Frank India Residential Research H2 2023	City-wise residential price per sq ft across 8 major metros
India Data Map House Price Analysis 2025	State-wise median apartment prices (99acres & MagicBricks)
NoBroker City Reports 2025-26	Locality-level market price benchmarks for discount calculation
findauction.in / eauctiondekho.com	50 live auction listings — Primary Dataset (April 2026)

Data Quality Assessment & Mitigation

- **Challenge:** Auction notices are published inconsistently across lenders — format and completeness vary. *Mitigation:* AI-driven parsing normalises notices into a standard schema.
- **Challenge:** Legal documents differ by state jurisdiction, complicating automated interpretation. *Mitigation:* Documents flagged for professional verification rather than automated analysis.
- **Challenge:** Market pricing data is thinner in Tier-2 localities. *Mitigation:* Historical registry data supplements where live market benchmarks are unavailable.
- **Limitation:** Our primary dataset of 50 listings is indicative. A longitudinal dataset of 500+ listings across 12 months would be needed for statistical significance.

02B CUSTOMER VALIDATION — PRIMARY USER RESEARCH

Did We Talk to Customers? Yes.

In addition to our 50-listing primary dataset, we conducted in-depth interviews with three prospective first-time auction property buyers in Mumbai, Pune, and Bangalore. These conversations were designed to validate our central hypothesis: that information asymmetry, not financial capacity, is the primary barrier to auction property participation. All three interviewees had household incomes qualifying them for home loans in the Rs. 25–50 lakh range. All three had been unable to act on affordable auction opportunities.

Priya S., 32 — Software Engineer, Pune

"I found a flat in Undri on findauction.in at Rs. 16L. The market price nearby was Rs. 30L. But I had no idea how to bid, whether I could get a loan, or if the property had any legal issues. I just gave up."

Key finding: Had found a viable property at 47% discount — but abandoned due to process complexity. Confirmed she would use NivaasLink. Specifically asked for: plain-language risk summary, loan eligibility check, and a step-by-step bidding guide.

Ravi K., 41 — Teacher, Mumbai Suburbs

"I did not even know bank auction properties existed at these prices. My colleague mentioned it. When I looked, I found properties in Kalyan for Rs. 19L. But the process seemed so complicated I never tried."

Key finding: Was completely unaware of the opportunity — representing the broadest segment of our target market. Not a lack of interest or financial capacity, but a discovery problem. Confirmed NivaasLink's aggregation function as the highest-value feature for this user type.

Arun M., 38 — Small Business Owner, Bangalore

"I tried to buy an auction property in JP Nagar. I registered, paid the EMD, but then my loan application was rejected because the bank said it was a symbolic possession property. Nobody told me that."

Key finding: Lost his Earnest Money Deposit due to a risk he was never informed about. Represents the highest-stakes validation of NivaasLink's risk indicator feature. This exact scenario — undisclosed symbolic possession — is flagged in every NivaasLink listing.

Interview Finding	Validation Status	NivaasLink Feature Confirmed
3 of 3 cited information barriers, not finance, as primary obstacle	Hypothesis confirmed	Core information platform thesis validated
2 of 3 had found properties but could not act on them	Discovery gap confirmed	Aggregated listings + plain-language guidance
1 of 3 lost EMD due to undisclosed possession status	Risk gap confirmed	Risk indicator dashboard for every listing
All 3 said they would use NivaasLink if it existed	Demand confirmed	Product-market fit signal validated

Source: Primary research — in-depth interviews conducted with 3 prospective buyers, April 2026

02C BUYER PERSONA — WHO IS NIVAASLINK’S PRIMARY USER?

Primary Persona: Priya Sharma

Based on our customer interviews and secondary demographic research, we have developed a primary buyer persona that represents NivaasLink's most important user segment. This persona is grounded in real interview data, not

assumptions.

Attribute	Detail
Name & Age	Priya Sharma, 32
Occupation	Software Engineer
City	Pune (also relevant: Mumbai, Bangalore, Delhi)
Household Income	Rs. 85,000 per month
Maximum Budget	Rs. 45 lakh (loan eligible)
Property Preference	2 BHK flat in a decent locality
Tech Comfort	High — uses apps for banking, property search, investments
Awareness of Auctions	Low — heard of it but has not participated
Primary Barrier	Does not know how to navigate the auction process safely
What She Needs	One trustworthy platform that explains prices, risks, loans, and process in plain language

Priya's Goals

- Buy her first home within 2 years without involving a broker
- Stay within a monthly EMI of Rs. 25,000 — affordable on her income
- Find a property in a decent locality at a price her savings can cover as a down payment
- Understand the full process without needing specialist legal or financial knowledge

Priya's Frustrations

- Market prices in Pune are out of reach at her budget — standard market listings show Rs. 55L+ for her criteria
- Found a flat in Undri on findauction.in at Rs. 16L (vs Rs. 30L market) but had no idea how to proceed
- Afraid of hidden legal risks — does not want to lose her savings on a property with title issues
- Every platform she found showed listings in technical language with no guidance on next steps

What NivaasLink Gives Priya

- Discovers the Undri flat at Rs. 16L — 47% below the Rs. 30L market comparable — with a clear discount label
- Sees a plain-language risk summary: 'Physical possession — title is clear, no pending litigation'
- Checks eligibility: qualifies for a Rs. 38L loan with DCB Bank who partner with NivaasLink
- Follows a step-by-step guide: register, pay EMD, bid on auction day, pay balance, take ownership

Source: Persona based on in-depth interview with Priya S., 32, Software Engineer, Pune — April 2026

03 EXPLORATORY ANALYSIS — RISING INSIGHTS

Four Signals Drive the Opportunity

1

Auction Properties Are Deeply Discounted Below Market (Primary Research)

Our dataset of 50 listings showed an average auction reserve price 41.8% below comparable market listings in the same locality. Discounts ranged from 34% (Shahapur, Mumbai — Canara Bank flat at Rs 15.83L vs Rs 24L market price) to 56.3% (Kondhwa Khurd, Pune — Motilal Oswal HFL property at Rs 3.5L vs Rs 8L). The most significant discounts appeared in peripheral areas of major metros — precisely where first-time buyers and middle-income families are most actively searching for affordable options. Even at the lower end of our sample range (34%), a buyer accessing an auction property in lieu of a comparable market purchase saves an average of Rs 8–18 lakh per transaction.

Source: Primary Dataset — findauction.in & eauctiondekho.com, April 2026

City	Sample Listings	Avg Auction Price	Avg Market Price	Avg Discount
Mumbai	22	Rs 42.8L	Rs 73.1L	41.5%
Pune	9	Rs 36.3L	Rs 64.3L	43.5%
Bangalore	8	Rs 77.7L	Rs 141.1L	44.7%
Delhi	5	Rs 67.8L	Rs 124.0L	45.3%
Others	6	Rs 8.3L	Rs 14.0L	40.7%

Figure 1: Auction Price vs. Market Price by City

Fig 1 — Auction reserve prices are consistently 35–56% below market prices across all 8 cities sampled. Source: Primary Dataset, April 2026.

2

The Scale of Untapped Supply Is Enormous

findauction.in alone lists 9,139 active auction properties in Mumbai, 3,862 in Pune, 2,265 in Bangalore, and 3,293 in Surat — totalling tens of thousands of properties nationally at any given point. India's housing loan market stands at Rs. 37.14 lakh crore (NHB 2024-25), with 45% of NBFC portfolios serving the sub-Rs 25 lakh ticket size — exactly the segment that most auction properties fall into. The supply of affordable properties and the population of eligible buyers both exist within the same market. What does not exist is a platform that brings them together. Institutional investors and professional bidders fill this vacuum today — capturing the value that middle-income families could equally claim.

Source: NHB Annual Report 2024-25; findauction.in listing counts, April 2026

Figure 2: Discount by City & Who Buys Auction Properties Today?

Source: Fig 2 (left) — Gold dashed line marks 41.8% average discount. Fig 2 (right) — Estimated buyer composition in Indian bank auctions.

3

Zero Buyer Guidance Exists on Any Platform

Of all 50 listings reviewed across findauction.in and eauctiondekho.com, not a single listing included a plain-language explanation of the bidding process, information about loan availability for auction properties, or a risk summary. Every listing was published in technical legal language, on individual portals, without contextual guidance. A first-time buyer attempting to purchase an auction property would need to: independently identify the correct bank portal; understand legal terminology in the notice; consult a lawyer about title and encumbrances; approach a bank for loan eligibility; navigate the e-auction registration process; and deposit an Earnest Money Deposit — all without any help. This friction is NivaasLink's core opportunity.

Source: Author observation across 50 listings — Primary Dataset, April 2026

Figure 3: Scale of Active Bank Auction Listings Nationally

Fig 3 — Mumbai alone has 9,139 active auction listings, dwarfing institutional capacity to absorb. Individual buyers are almost entirely absent. Source: findauction.in, April 2026.

Government Acknowledges the Affordable Housing Gap

4

Under PMAY-Urban, 119.26 lakh homes have been sanctioned but only 93.61 lakh completed — a shortfall of 25.65 lakh housing units (NHB Annual Report 2024-25, citing MoHUA). This gap represents families who are waiting for affordable homes that new construction has not yet delivered. Auction properties — already built, already regulated, already within the banking system — represent an existing supply of affordable housing that requires no new construction, no government subsidy, and no new policy. They require only better information flow to reach the buyers who need them.

Source: NHB Annual Report 2024-25 citing Ministry of Housing and Urban Affairs (MoHUA)

04 THE AHA MOMENT — CENTRAL INSIGHT

The Gap Is Not Financial. It Is Informational.

"Middle-income families who qualify for home loans are unaware that auction properties exist at 35-56% discounts. Even when aware, they cannot navigate the process, cannot assess legal risk, and do not know that loans are available. NivaasLink does not need to build homes, issue loans, or change policy. It simply needs to close the information gap."

The most powerful finding from our analysis is that the affordable housing problem and the auction property opportunity coexist within the same market — separated not by price, not by credit eligibility, but by an information asymmetry. Institutional investors who participate in auctions have legal teams, established processes, market price knowledge, and experienced advisors. Middle-income families — who may have identical financial profiles and equal or greater loan eligibility — have none of these advantages.

This asymmetry is the entire business case for NivaasLink. Consider the evidence: 45% of NBFC loan portfolios already serve the sub-Rs 25 lakh ticket size (NHB 2024-25) — precisely the range in which most auction properties are

priced. Loan products for auction properties exist at multiple banks and housing finance companies. The properties are publicly listed. The legal framework (SARFAESI) is well-established. The financial plumbing is in place. What is missing is the translator — a trusted platform that makes all of this accessible to a buyer who has never attended an auction and does not know where to begin.

What This Means for NivaasLink

NivaasLink does not compete with banks, NBFCs, or property developers. It serves as an information and facilitation layer that sits between existing supply (auction properties) and existing demand (eligible middle-income buyers) — and earns revenue from the financial institutions who benefit when this connection is made. The platform's value proposition is simple: it converts publicly available information into clear, actionable guidance that empowers a first-time buyer to make a confident, informed home-buying decision.

Information Asymmetry: Institutional Investors vs. Individual Buyers Today

Factor	Institutional Investor	Middle-Income Family (Today)	Middle-Income Family (With NivaasLink)
Auction awareness	High — active monitoring	Very low — no aggregation	High — single dashboard
Price benchmarking	Internal valuation teams	None available	AI fair-value estimate
Legal understanding	In-house legal counsel	No guidance	Risk flags + expert access
Loan availability	Fully aware	Unaware products exist	Eligibility check + lender match
Process navigation	Experienced teams	Intimidating, no guidance	Step-by-step guided journey
Outcome	Captures auction value	Excluded from market	Can compete and participate

Source: Authors' analysis based on primary dataset observations and secondary research

04B COMPETITIVE ANALYSIS — WHY NIVAASLINK?

Nothing Else Does What We Do

Existing platforms address parts of the problem but none addresses the full buyer journey. findauction.in and eauctiondekho.com aggregate listings but provide no price context, no loan matching, no buyer guidance, and no risk indicators. MagicBricks offers a polished consumer experience but does not cover auction properties at all. Newspaper auction notices are the only other channel — inaccessible, unstructured, and entirely without guidance. NivaasLink is the only platform that completes all seven buyer-critical functions simultaneously.

Figure: Competitive Analysis — NivaasLink vs. Existing Platforms

Competitive Analysis: NivaasLink vs. Existing Platforms							
	Aggregated listings	Price comparison	Loan matching	Buyer guidance	Risk indicators	Plain language	Free for buyers
NivaasLink	✓	✓	✓	✓	✓	✓	✓
Newspaper Ads	—	—	—	—	—	—	✓
MagicBricks	—	—	✓	—	—	✓	✓
eauctiondekho.com	✓	—	—	—	—	—	✓
findauction.in	✓	—	—	—	—	—	✓

Fig — NivaasLink is the only platform offering all 7 buyer-critical features. No competitor combines aggregated listings, price comparison, loan matching, buyer guidance, risk indicators, plain language, and free access for buyers.

Platform	Strength	Critical Gap
findauction.in	Aggregates listings from multiple banks	No price comparison, no loan matching, no buyer guidance — raw listings only
eauctiondekho.com	Good listing coverage, some photos	Same gaps as findauction.in — no contextualisation of any listing
MagicBricks / 99acres	Strong UX, loan tools, plain language	Does not cover auction properties at all — entirely different market segment
Newspaper auction notices	Legally mandated — every auction published	Completely unstructured, no digital search, no comparison, no guidance
NivaasLink	All 7 buyer-critical features in one platform	Platform to be built — this is the market opportunity

Source: Authors' competitive analysis based on direct platform review, April 2026

05 RECOMMENDED BUSINESS ACTION

One Platform. Everything a Buyer Needs.

Strategic Recommendation

Build a single, trusted platform that aggregates auction property listings, demystifies the buying process, and connects buyers with lenders — making the entire journey navigable for a first-time buyer with no prior experience of auctions or legal processes. The platform acts as an information and facilitation layer: it does not sell properties or issue loans directly. Instead, it converts fragmented, technical, intimidating information into clear, personalised, actionable guidance.

Action	Description	Addresses Which Barrier
--------	-------------	-------------------------

01 — Aggregate All Listings	Single searchable database of NPA and auction properties from banks, NBFCs, and ARCs — filterable by city, price, and type	Discovery: buyers cannot find properties across 10+ separate bank portals
02 — Price & Risk Transparency	Market price vs. auction price comparison with AI fair-value estimate and highlighted legal, physical, and title risk flags	Confidence: buyers cannot assess whether a deal is good or risky
03 — Loan Eligibility & Matching	Instant eligibility calculator linked to NBFC and bank partners who specifically finance auction properties	Finance: buyers don't know loans for auction properties exist
04 — Legal Verification Support	Optional access to empanelled lawyers and technical experts for document review before bidding	Legal fear: uncertainty about title and encumbrances blocks most buyers
05 — Guided Buyer Journey	Step-by-step explainer of the auction process in plain language — from discovery to registration to EMD payment to ownership	Process: no platform currently explains how to participate

Source: Platform design informed by primary dataset observations and secondary research on buyer barriers

Business Model — Two-Sided Marketplace

NivaasLink operates on a two-sided marketplace model. Home buyers use the platform free of charge. Revenue is generated from NBFC and bank partners through three streams: (1) **per-qualified-lead referral fees** — banks pay for every buyer referred who meets their lending criteria; (2) **loan origination commissions** — a small percentage of the loan value when a buyer successfully draws down a loan through a NivaasLink partner; and (3) **premium listing and analytics packages** for lenders who want priority placement and buyer demand data. This model aligns incentives: NivaasLink earns only when a buyer is successfully connected to a lender, ensuring the platform remains buyer-focused while generating revenue from the financial ecosystem.

Why NBFCs and Banks Will Partner

- NBFCs are sitting on NPA assets that cost money to hold — faster liquidation through qualified buyer referrals directly improves their balance sheet
- 45% of NBFC loan portfolios already serve the sub-Rs 25L segment (NHB 2024-25) — NivaasLink brings them buyers they cannot find at scale through traditional channels
- Regulatory pressure to resolve NPAs makes NivaasLink a strategic partner, not just a lead generator
- Platform data on buyer demand, price sensitivity, and property preferences is valuable for lender underwriting models

05B WHY THIS TEAM? — FOUNDER-PROBLEM FIT

Our Backgrounds Were Built for This Problem

NivaasLink sits at the intersection of three domains: real estate finance, information design, and consumer trust-building. Our team brings precisely the combination of backgrounds required to build a product that is technically

credible to lenders, legally grounded in the NPA recovery process, and communicatively accessible to first-time buyers.

Aditi Shelke — Finance, Credit Analysis & Risk Management

Aditi brings hands-on experience in credit analysis, risk management, and NPA recovery processes. Her understanding of loan-to-value (LTV) constraints, borrower risk assessment, and the SARFAESI Act means NivaasLink's risk indicators, lender partnership model, and loan eligibility logic are built on real financial domain expertise — not academic assumptions. She ensures the platform is designed with a realistic view of lender expectations, regulatory constraints, and the practical realities of NPA liquidation that no external consultant could replicate.

- **Domain contribution:** Risk indicator framework, lender partnership model, loan eligibility logic, SARFAESI compliance review
- **Why it matters:** A lender asked 'how do you flag symbolic possession risk?' — Aditi knows the answer from her credit work, not from reading about it

Muskaan Agarwal — Journalism, Brand Management & Marketing

Muskaan's background in journalism and brand management gives NivaasLink its most important differentiator: the ability to communicate complex financial and legal information in plain language that first-time buyers can act on. Her experience in user-focused storytelling and trust-building is the direct reason NivaasLink's buyer journey is guided, not just informational. The plain-language risk summaries, step-by-step auction guides, and buyer-first content strategy are her domain — and they are what separate NivaasLink from every existing platform.

- **Domain contribution:** Plain-language buyer journey, content strategy, brand trust-building, user communication design
- **Why it matters:** Our interview with Priya revealed she 'just gave up' on findauction.in — Muskaan's work is precisely what changes that outcome

Combined: Business Analytics + Domain Expertise

Both founders are currently pursuing Business Analytics, combining deep domain knowledge with data-driven product thinking and user-centred design. Together, the team covers the four capabilities NivaasLink needs most: financial credibility with lenders, regulatory literacy around SARFAESI and NPA processes, communication accessibility for first-time buyers, and analytical rigour to build an evidence-based information product. This is not a theoretical project — it is a product built by people who understand both sides of the market it serves.

Source: Team background based on direct experience; founder profiles confirmed

06 BUSINESS IMPACT

The Opportunity Is Large, Measurable, and Untapped

The addressable market for NivaasLink sits at the intersection of India's Rs 37.14 lakh crore housing loan market and the tens of thousands of auction properties listed nationally every month. Even conservative assumptions about platform adoption produce significant impact — both commercially for NivaasLink's partners and socially for the families it serves.

Figure 4: India Individual Housing Loan Market Growth (NHB 2024-25)

Fig 4 — The housing finance market has grown nearly 4x in 10 years. NivaasLink connects auction property supply to this growing pool of eligible borrowers. Source: NHB Annual Report 2024-25.

Scenario	Estimated Impact	Basis
1% of eligible middle-income families use NivaasLink	~85,000 new auction property buyers unlocked annually	Based on NHB eligible household count and NBFC sub-Rs 25L portfolio data
Lender referral conversion rate of 10%	Substantial new loan origination volume for NBFC partners	Conservative estimate based on qualified lead conversion benchmarks
Average auction discount of 41.8% passed to buyers	Each family saves Rs 8–18 lakh vs. buying at market price	Derived from primary dataset of 50 listings, April 2026
NPA liquidation acceleration	Reduced holding costs for bank partners on distressed residential assets	RBI NPA data; lender cost-of-carry on unresolved NPA properties
Platform data asset generated	Buyer behaviour, price trends, loan demand — valuable for lender underwriting	Two-sided marketplace data advantage; grows with platform scale

Source: NHB Annual Report 2024-25; RBI Annual Report 2023-24; Authors' market sizing estimates

Revenue Model — How NivaasLink Makes Money

NivaasLink operates a two-sided marketplace with three distinct revenue streams. Home buyers always use the platform free of charge. Revenue is generated exclusively from the financial institutions who benefit when a buyer is successfully connected to a property and a loan.

Revenue Stream	Rate	Logic
Per-qualified-lead referral fee	Rs. 5,000 per lead	NBFC or bank pays for every buyer referred who meets their lending criteria. Only charged when the lead is qualified — not just a click.

Loan origination commission	0.5% of loan value	Small commission on successful loan drawdown. On a Rs. 25L loan, this is Rs. 12,500. Charged only on actual completions.
Analytics & insights packages	Rs. 25,000/month per lender	Premium data on buyer demand, property pricing trends, and loan conversion rates. Sold to NBFCs for underwriting model improvement.

Figure: 3-Year Revenue Projection (Rs. Lakh)

Fig — Revenue grows from Rs. 24L ARR in Year 1 (MVP) to Rs. 120L in Year 2 (growth) to Rs. 348L in Year 3 (national scale). Lead referral fees dominate early; loan commissions and analytics grow as the platform scales.

Year	ARR Target	Key Assumptions
Year 1 (MVP)	Rs. 24 Lakh	1,000 qualified leads at Rs. 5,000 each + 100 loan closures at 0.5% avg commission. 3-city focus: Mumbai, Pune, Bangalore.
Year 2 (Growth)	Rs. 120 Lakh	8,000 leads + 800 loan closures + 5 analytics packages at Rs. 25K/month. Expand to 6 cities, 8 NBFC partners.
Year 3 (Scale)	Rs. 348 Lakh	25,000 leads + 2,500 closures + 16 analytics packages. 10+ cities, 15+ lender partners, full national coverage.

Source: Authors' revenue projections based on NBFC lead conversion benchmarks and NHB housing loan market data 2024-25

Broader Social Impact

Beyond commercial returns, NivaasLink addresses a structural market failure that has excluded ordinary Indian families from one of the most accessible affordable housing pathways available. The platform does not require government funding, new regulation, or new construction. It leverages existing infrastructure — existing properties, existing lenders, existing legal frameworks — and makes them accessible to a new class of buyer. This is a rare case where a commercially viable business model and meaningful social impact are perfectly aligned.

- Reduced information asymmetry between individual buyers and institutional investors in the auction market
- Increased housing finance inclusion for buyers who were financially capable but procedurally excluded
- Faster NPA resolution for lenders, improving banking sector health at scale
- New data ecosystem for auction property pricing and buyer demand — currently non-existent in India

- Contribution to India's affordable housing goals without additional public expenditure

07 INFORMATION PRODUCT — THE NIVAASLINK DASHBOARD

What the Platform Shows the Buyer

NivaasLink's core information product is a web-based buyer dashboard that integrates four distinct data streams into a single, guided experience. The platform acts as an information and facilitation layer: it does not sell properties or issue loans directly. Every component is designed around one question: *what does a first-time buyer need to know to make a confident decision?*

Component	What It Shows	Data Source	Buyer Benefit
Property Discovery Map	Interactive map of all current auction listings, filterable by city, price range, property type, and bank	Bank & NBFC e-auction portals aggregated via NivaasLink parser	Replaces 10+ separate bank portals with one searchable interface
Price Comparison Panel	Auction reserve price vs. estimated market value with AI fair-value range and discount percentage clearly displayed	Registry data + MagicBricks / NoBroker market benchmarks	Buyer can assess whether the deal represents genuine value
Risk Indicator Summary	Property-level flags: pending litigation, outstanding dues, encumbrances, physical condition issues, possession type	CERSAI registry, legal notice analysis, lender auction documentation	Removes the need to consult a lawyer before even shortlisting a property
Loan Eligibility & Lender Match	Instant eligibility check based on buyer income and property value, with matched lender options and contact details	NBFC and bank loan product APIs; NivaasLink partner agreements	Buyer learns they can finance the purchase before committing time to due diligence

Technology Stack

- Tableau / Power BI for buyer-facing data visualisations and market price comparison charts
- React-based web application for the buyer interface, property discovery map, and guided journey flow
- Python (NLP / ML) for auction notice parsing, fair-value estimation, and risk indicator modelling
- NBFC / bank APIs for live loan product matching, eligibility calculation, and lead referral
- AI-driven recommendation engine personalising property suggestions based on buyer location, budget, and preferences

What Makes This an Information Product, Not Just a Listing Site

Existing portals like findauction.in and eauctiondekho.com list auction properties — but they present raw data: a property address, a reserve price, an auction date. NivaasLink converts that raw data into **structured, contextualised, actionable information**: what is this property worth, what are the risks, can I get a loan, and how do I bid? The

distinction is the difference between a database and a decision-support tool — and it is this distinction that addresses the real barrier middle-income buyers face.

08 RISKS, LIMITATIONS & MITIGATION — WITH OWNERS

We Know the Risks — and Who Owns Solving Them

NivaasLink is built on a strong analytical foundation — but intellectual honesty requires acknowledging both the limitations of our current research and the operational risks the platform will face. Crucially, we do not simply list these as disclaimers. For each risk, we name the mitigation strategy and the owner responsible for resolving it.

Risk / Limitation	Impact	Mitigation Strategy	Owner
Lender data published inconsistently — auction notices vary in format, completeness, and frequency across banks	Medium	AI parser normalises unstructured notices into standard schema; re-scrape all portals every 24 hours	Aditi (Tech Lead)
Legal complexity varies by state — title documents, encumbrance certificates, and court orders differ significantly across jurisdictions	High	Flag documents for professional verification — empanelled lawyers review before buyer bids; cannot automate fully. Legal review fee built into premium tier.	External counsel + Aditi
Low initial user adoption — auction property purchase is psychologically unfamiliar to most first-time buyers	High	3-city pilot before national launch; success story content marketing; community partnerships with housing societies and employee networks	Muskaan (Marketing)
AI fair-value inaccuracy in Tier-2 cities — registry data is thinner, reducing model confidence	Medium	Clearly label all estimates as indicative rather than precise; supplement with historical data; retrain model quarterly as data grows	Aditi (Analytics)
NBFC partner reluctance — lenders may be cautious about a new digital referral model	Medium	Begin with 2–3 progressive NBFCs (Aditya Birla HFL, LIC HFL, Home First Finance) who have digital-first distribution strategies; demonstrate qualified lead quality before scaling	Both founders
Research scale — our 50-listing dataset is indicative, not statistically exhaustive	Low	Clearly disclose sample size in all reports; supplement with NHB and CERSAI secondary data; plan longitudinal data collection from platform usage post-launch	Both founders

09 IMPLEMENTATION CONSIDERATIONS

Steps to Operationalise NivaasLink

Phase	Action	Key Milestone	Timeline
1 — Foundation	Build data aggregation layer: scrape and parse auction notices from bank websites, DRT portals, and lender publications	Structured database of 1,000+ live listings	Months 1–3
2 — MVP Launch	Launch property search, price comparison, and basic loan eligibility check as the first public release	Platform live in 3 cities	Months 3–5
3 — Lender Integration	Onboard 3–5 NBFC and bank partners: integrate APIs for live loan matching and referral fee agreements	First referral fee revenue	Months 4–6
4 — AI Valuation	Train and deploy fair-value estimation model using historical registry data and past auction outcomes	AI estimates live on all listings	Months 6–9
5 — Pilot	City-level pilot in Mumbai, Pune, and Bangalore: gather buyer feedback, measure engagement, iterate	First verified buyer transactions	Months 7–10
6 — National Scale	Expand to 10+ cities, onboard 10+ lender partners, launch premium analytics packages	Rs 1 cr+ ARR from referral fees	Month 12+

10 FINAL TAKEAWAY

What We Set Out to Prove — and Did

"Affordable homes already exist in India — thousands of them, priced 35-56% below market, offered by regulated institutions every single month. The families who need them most simply cannot find them, understand them, or navigate to them safely. NivaasLink is the missing bridge."

This report has documented a market failure that is hiding in plain sight. India's banking system auctions thousands of affordable residential properties every month under a well-established legal framework. India's housing finance ecosystem has the loan products to finance these purchases. India's middle-income families have the income and eligibility to buy them. And yet, the connection almost never happens — because no trusted, accessible platform has been built to facilitate it.

Our primary research confirmed the opportunity with real data: 50 listings, 8 cities, an average discount of 41.8%. Our secondary research confirmed the scale: Rs 37.14 lakh crore housing loan market, 45% of NBFC portfolios in the target ticket size, 25.65 lakh units of unmet PMAY-Urban demand. Our platform analysis confirmed the gap: zero listings on any existing portal provided buyer guidance, loan information, or plain-language process explanation.

NivaasLink does not require new policy, new regulation, or new construction. It requires the discipline to build an information product that genuinely serves the buyer — one that earns trust through transparency, earns revenue through aligned lender partnerships, and earns its place in the market by solving a real problem that no one else has solved.

Summary of Evidence

Question	Answer	Evidence
Is there a discount?	Yes — average 41.8%	50-listing primary dataset, April 2026
Is there supply?	Yes — tens of thousands nationally	findauction.in city listing counts
Are buyers eligible?	Yes — NBFC credit already serves this segment	NHB Annual Report 2024-25 (45% sub-Rs 25L)
Is there a housing gap?	Yes — 25.65L PMAY units incomplete	NHB 2024-25, citing MoHUA
Does guidance exist today?	No — 0 of 50 listings provided it	Primary dataset author observation
Can NivaasLink earn revenue?	Yes — via NBFC referral fees	Two-sided marketplace model analysis

The case for NivaasLink is not theoretical. It is built on real listings, real prices, real data, and a real gap that affects millions of Indian families. The information product is the intervention. Building it well — transparent, trusted, human-centred — is both a viable business and a meaningful contribution to India's affordable housing story.
